

Trust Center

Flosum's security solution brings an adaptive security framework to Salesforce environments.

For organizations using the Salesforce platform to run their business, there are evolving security implications when dealing with third-party development or custom code in a Salesforce environment.

Flosum offers a solution to secure Salesforce environments from cybersecurity threats and data breaches. The Trust Center is an always-on Salesforce native security solution built to monitor and scan, alert and automate remediations to maintain the security of Salesforce environments.

Capabilities & Key Features

Org Monitoring – Consolidated view of all org settings for security enforcement.

Security Templates – Build security policy templates and apply them to multiple orgs to ensure hardening rules are executed and policies enforced.

Security Violation Alerts – Alerts indicated within each stage of the DevOps process to discover potential security and code conflicts before they occur.

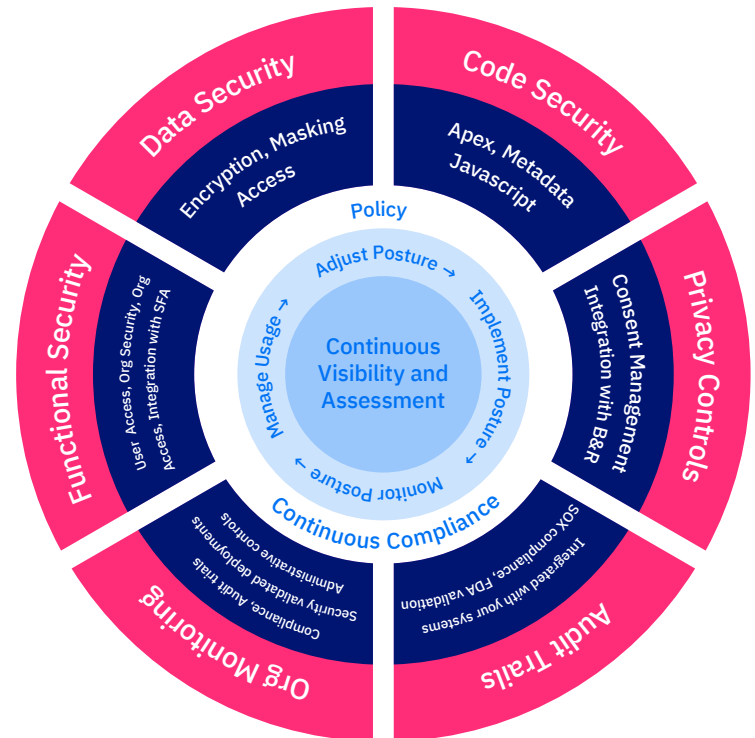

Remediation – Immediately automate remediation tasks or manually deploy fixes to changes found in violation of templates.

Audit Trails – Access detailed audit trails of all changes to prioritize based on designated risk levels and preserve tracked records for any amount of time.

Data Masking – Mask data belonging to production and sandbox environments at rest or in motion between orgs to ensure confidential data remains uncompromised.

The Command Center for your Salesforce Security

Flosum's Trust Center is the first all-encompassing solution of its kind to easily integrate with DevOps, Data management, and other Salesforce Security platforms. The Trust Center features always-on monitoring that scans Salesforce orgs and source code to identify potential security threats. Organizations are then alerted to those threats for security and development teams to take action, or automated remediation tasks to run instead.

Architecture

Flosum Trust Center is 100% Native and built on the Salesforce platform. Not only do users experience the same familiar UX/UI as Salesforce, but organizational data also never leaves the platform. Not even Flosum will ever have access to your data.

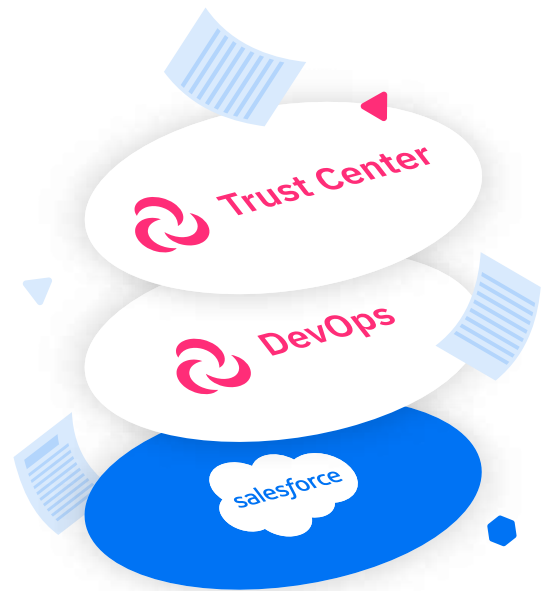

Flosum's security solution changes the way security is defined within Salesforce. Organizations can feel at ease knowing vital data is being monitored 24 hours a day, 365 days a year.

Outcomes

- Reduced audit cost
- Alignment between Security and Salesforce teams
- Governance
- Continual monitoring
- Data protection
- Unbreakably secure environments

Flosum Solutions

- **DevOps**
100% native Salesforce application that seamlessly orchestrates changes across development ecosystems
- **Data Migration**
Move a complete data set or subset of data in minutes, while preserving all parent-child relationships
- **Data Backup & Recovery**
Automate data backups, compare, and identify lost data, and restore data while maintaining relationships
- **Trust Center**
Security for Salesforce environments that monitor, alert and scan custom code for potential security breaches.
